EXPLANATORY STATEMENT.

The figures relating to Births and Deaths are tabulated from Returns furnished by the Local Registrars, those relating to Marriages from Returns received from the Clergy, Authorised Persons, Registrars of Marriages, &c. These figures may not correspond exactly with the revised figures published later in the Statistical Review.

The figures relating to Notifications of Infectious Diseases are summarised from those published in the Weekly Returns, adjusted in respect of any returns or corrections received too late for insertion in that series.

Table I. shows, for England and Wales, the Marriages, Births and Deaths for the 10 years preceding, and for each quarter of those years.

Table II. shows the Annual Rates calculated on the above.

Table III. shows the Birth and Death Rates, and Analysis of Mortality during the last 5 Quarters, in (a) England and Wales, (b) 105 County Boroughs and Great Towns, and (c) Smaller Towns with adjusted populations 20,000-50,000 in 1921.

Table IV. shows the Births, Deaths (distinguishing deaths of Infants under one year) in the Quarter under review for Administrative Counties with the Associated County Boroughs, and Table IVa. the Marriages in the preceding Quarter in England and Wales by Registration Counties.

Table V. shows, for the 105 County Boroughs and Great Towns and the Metropolitan Boroughs, the Births and Deaths (distinguishing certain causes and those of Infants under 1 year) and the corresponding annual rates for the 13 weeks ended 3rd April 1926.

Table VI. shows, for the 158 Smaller Towns, the Births and Deaths (distinguishing certain causes and those of Infants under one year) for the quarter ended 31st March 1926.

Table VII. shows the Births and Deaths (distinguishing certain causes) and death-rates in London and in certain cities in the British Empire and in foreign countries, in the last available Quarter.

Table VIII. is a summary of returns of Notified cases of Infectious Diseases for the 13 weeks ended 3rd April 1926. These figures are included in the present publication by arrangement with the Ministry of Health, in pursuance of Section 5 of the Census Act, 1920.

Note :—The returns for the quarters ending 30th June and 31st December respectively contain lists of the changes of boundaries of administrative and poor law areas during the six months ending on these dates, that for the quarter ending 30th September tables relating to summer mortality from diarrhoea and enteritis, and that for the quarter ending 31st December a summary of certain figures for the year.

NOTES ON THE FIRST QUARTER OF 1926.

ENGLAND AND WALES.

Births.

The Births registered in the *First Quarter* of 1926 numbered 174,051 and were 1,595 below the number recorded in the corresponding Quarter of 1925. The Illegitimate Births totalled 7,279, or 334 more than in the first Quarter of 1925.

Of these 174,051 Births 88,583 were males and 85,468 females, giving a proportion of 1,036 males to 1,000 females; the average proportion in the 10 preceding first Quarters was 1,048.

The Births registered in the Quarter correspond to an annual rate of 18·2 per 1,000 of the estimated mid-year population for the year 1925. This rate is 0·1 per 1000 below that recorded in the corresponding Quarter of 1925, and was the lowest birth-rate recorded in any first Quarter except during the years 1918 and 1919.

Deaths.

The Deaths registered numbered 130,574 and were 4,300 more than in the preceding Quarter, but 7,764 less than in the corresponding Quarter of 1925. They included 65,752 males and 64,822 females, corresponding to an annual rate of 13·6 per 1,000 of the estimated population and a proportion of 1,014 males to 1,000 females. The general death-rate was 0·8 per 1,000 below that recorded during the first Quarter of last year.

Influenza was stated to be either a primary or contributory cause of deaths in 2,867 cases, or 2·2 per cent. of the total deaths.

Measured by the proportion of deaths of infants under one year of age to births registered, the Infant Mortality was equal to 85 per 1,000, this being 3 per 1,000 below the rate for the first Quarter of 1925, and 20 per 1,000 below the average of the 10 preceding first Quarters.

Urban Mortality.

The highest death-rates from the several epidemic diseases in the 105 Great Towns (Table V.) last Quarter were as follows :—

From *enteric fever* 0·10 in South Shields; from *measles* 0·69 in Enfield and in Canterbury, 0·76 in West Ham, 1·09 in Carlisle and 1·13 in Edmonton; from *scarlet fever* 0·10 in Stoke-on-Trent and in Rhondda, 0·11 in Rotherham, 0·12 in Chesterfield and 0·15 in Carlisle; from *whooping cough* 0·75 in Wigan, 0·80 in Nottingham and in Oldham and 1·33 in Middlesbrough; from *diphtheria* 0·31 in Willesden and in Portsmouth, 0·35 in Walsall, 0·42 in Bury, and 0·62 in Edmonton; from *influenza* 0·61 in Wallasey, 0·67 in Plymouth, 0·80 in Oldham, and 0·94 in Exeter.

The highest death-rates per 1,000 Births from *diarrhœa and enteritis* among children under two years of age were 17·8 in Salford, 18·7 in Stockton-on-Tees, 22·7 in Birkenhead, and 26·9 in Wakefield.

Small-pox.

Five fatal cases of small-pox, of which 2 belonged to Blaydon U.D. and 1 each to Cambridge M.B., Houghton-le-Spring R.D. and Castle Ward R.D. were registered during the quarter.

A supplementary table (VIII. *a*) showing the distribution of the cases of small-pox notified during the Quarter is given on p. 24.

Typhus fever.

A fatal case of this disease was registered in Sunderland C.B. during the 13 weeks ended 3rd April, 1926.

NATURAL INCREASE.

The natural increase of population in England and Wales for the Quarter under review by excess of Births over Deaths was 43,477, as against 68,181, 25,115 and 37,308 in the first Quarters of 1923, 1924 and 1925.

NOTES ON MARRIAGES.—Fourth Quarter, 1925.

The number of *persons* married in the *fourth* Quarter of 1925 in England and Wales was 154,088, a decrease of 26,228 compared with the number in the preceding Quarter, and 2,324 less than that in the corresponding Quarter of 1924. The number corresponds to an annual rate of 15·7 per 1,000 of the estimated mid-year population.

UNITED KINGDOM AND IRISH FREE STATE.—
Third Quarter, 1925.

In Great Britain and Ireland 230,543 births and 121,489 deaths were registered in the three months ended 30th September, 1925. The natural increase in population was therefore 109,054. The number of persons married was 210,124.

For facts, in detail, concerning Scotland, Northern Ireland, and the Irish Free State, reference should be made to the Returns published by their respective Registrars General.

METEOROLOGY.***JANUARY.**

January was wet and mild except for a short spell of cold weather which commenced on the 13th and lasted generally for about a week. During the cold spell, low temperatures in the screen and severe ground frosts were recorded at several stations; amongst the lowest screen minima recorded were 2°F at Luton and 3°F at Raunds and Roade on the 17th. Grass minimum temperatures of -4°F at St. Albans and -2°F at Cranwell and Berkhamsted were recorded on the 17th. Snow fell widely between the 14th and 18th and, owing to the persistence of frosty weather, lay on the ground for several days. Precipitation was above normal in all districts; in parts of Oxfordshire and Berkshire more than twice the normal amount of rain fell. Floods occurred widely during the first week. Sunshine was deficient in most districts, particularly in the midland and eastern counties; the largest amounts were recorded at stations on the south coast of England.

FEBRUARY.

Except for a brief spell of cold weather from the 10th to the 13th, dull and very mild weather prevailed during February. At several places the month was the mildest February on record. The highest temperatures of the month occurred generally between the 24th and the 27th and the lowest temperatures on the 13th and 14th. Rainfall aggregates varied considerably, some districts showing a marked deficit and other districts an excess. Precipitation was deficient in parts of Yorkshire and Lincolnshire and in the south-western districts, with the exception of parts of Devonshire where there was a moderate excess; elsewhere it was above normal. Snow or sleet fell in several places between the 9th and the 11th and again on the 16th while thunderstorms, accompanied by hail in some instances, occurred widely on the 15th and 16th.

In nearly all districts the mean daily duration of sunshine was below the normal. High winds occurred frequently in the northern districts during the first half of the month but gales were infrequent.

MARCH.

The weather of March was, on the whole, fair and mild and exceptionally dry. The first two weeks were of a stormy character, westerly gales occurring widely between the 3rd and the 6th and from the 9th to the 11th. Temporary falls in temperature took place on the 4th and during a spell of easterly winds between the 16th and 26th. Ground frosts occurred frequently during the second and third weeks of the month. In all districts monthly aggregates of precipitation were below normal, the deficiency being greatest in the eastern and southern districts. In many places the month was the driest March on record. Little rain fell in the London area; at Greenwich, Camden Square and at Richmond (Kew Observatory) the month was the driest March on record since 1841, 1858 and 1871 respectively. There were several bright periods but, on the whole, monthly sunshine totals were below normal except in some eastern and south-eastern districts.

* Furnished by the Director of the Meteorological Office.

* Excluding non-civilians.

† The populations relate to 1926. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland. Births are similarly corrected. Deaths in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas, and in the case of Belfast by the inclusion of certain institutional deaths occurring elsewhere. The figures for Edinburgh and Glasgow relate to the calendar quarter.

‡ Including 1 death from Typhus fever.

EXPLANATORY STATEMENT.

The figures relating to Births and Deaths are tabulated from Returns furnished by the Local Registrars, those relating to Marriages from Returns received from the Clergy, Authorised Persons, Registrars of Marriages, &c. These figures may not correspond exactly with the revised figures published later in the Statistical Review.

The figures relating to Notifications of Infectious Diseases are summarised from those published in the Weekly Returns, adjusted in respect of any returns or corrections received too late for insertion in that series.

Table I. shows, for England and Wales, the Marriages, Births and Deaths for the 10 years preceding, and for each quarter of those years

Table II. shows the Annual Rates calculated on the above.

Table III. shows the Birth and Death Rates, and Analysis of Mortality during the last 5 Quarters, in (a) England and Wales, (b) 105 County Boroughs and Great Towns, and (c) Smaller Towns with adjusted populations 20,000-50,000 in 1921.

Table IV. shows the Births, Deaths (distinguishing deaths of Infants under one year) in the Quarter under review for Administrative Counties with the Associated County Boroughs, and Table IVa. the Marriages in the preceding Quarter in England and Wales by Registration Counties.

Table V. shows, for the 105 County Boroughs and Great Towns and the Metropolitan Boroughs, the Births and Deaths (distinguishing certain causes and those of Infants under 1 year) and the corresponding annual rates for the 13 weeks ended 3rd July 1926.

Table VI. shows, for the 158 Smaller Towns, the Births and Deaths (distinguishing certain causes and those of Infants under one year) for the quarter ended 30th June 1926.

Table VII. shows the Births and Deaths (distinguishing certain causes) and death-rates in London and in certain cities in the British Empire and in foreign countries, in the last available Quarter.

Table VIII. is a summary of returns of Notified cases of Infectious Diseases for the 13 weeks ended 3rd July 1926. These figures are included in the present publication by arrangement with the Ministry of Health, in pursuance of Section 5 of the Census Act, 1920.

Table VIIIa. shows the local distribution of the cases of small-pox notified during the 13 weeks ended 3rd July, 1926.

Note.—The returns for the quarters ending 30th June and 31st December respectively contain lists of the changes of boundaries of administrative and poor law areas during the six months ending on these dates, that for the quarter ending 30th September tables relating to summer mortality from diarrhoea and enteritis, and that for the quarter ending 31st December a summary of certain figures for the year.

NOTES ON THE SECOND QUARTER OF 1926.

ENGLAND AND WALES.

Births.

The Births registered in the *Second* Quarter of 1926 numbered 181,455 and were 5,519 below the number recorded in the corresponding Quarter of 1925. The Illegitimate Births totalled 7,809, or 254 more than in the second Quarter of 1925.

Of these 181,455 Births 92,681 were males and 88,774 females, giving a proportion of 1,044 males to 1,000 females; the average proportion in the 10 preceding second Quarters was 1,047.

The Births registered in the Quarter correspond to an annual rate of 18·7 per 1,000 of the estimated mid-year population for the year 1925. This rate is 0·6 per 1000 below that recorded in the corresponding Quarter of 1925, and was the lowest birth-rate recorded in any second Quarter except during the years 1917-19.

Deaths.

The Deaths registered numbered 113,818 and were 16,756 less than in the preceding Quarter, but 551 more than in the corresponding Quarter of 1925. They included 58,429 males and 55,389 females, corresponding to an annual rate of 11·7 per 1,000 of the estimated population and a proportion of 1,055 males to 1,000 females. The general death-rate was equal to that recorded during the second Quarter of last year.

Influenza was stated to be either a primary or contributory cause of deaths in 3,616 cases, or 3·2 per cent. of the total deaths.

Measured by the proportion of deaths of infants under one year of age to births registered, the Infant Mortality was equal to 62 per 1,000, this being 4 per 1,000 below the rate for the second Quarter of 1925, and 15 per 1,000 below the average of the 10 preceding second Quarters.

Urban Mortality.

The highest death-rates from the several epidemic diseases in the 105 Great Towns (Table V.) last Quarter were as follows:—

From *enteric fever* 0·09 in Northampton; from *measles* 0·56 in West Hartlepool, 0·62 in Great Yarmouth and 0·63 in Aberdare; from *scarlet fever* 0·09 in York and 0·13 in Rochdale and in Stockport; from *whooping cough* 0·36 in Doncaster, 0·41 in Oldham, 0·48 in Bootle and 1·30 in Stockton-on-Tees; from *diphtheria* 0·22 in Carlisle and in Nottingham, 0·28 in Edmonton, 0·33 in Willesden and 0·43 in Portsmouth; from *influenza* 1·15 in Gateshead, 1·17 in St. Helens, 1·23 in Warrington and 1·26 in Oldham.

The highest death-rates per 1,000 Births from *diarrhœa and enteritis* among children under two years of age were 1·8 in Liverpool, 15·5 in Wallasey, 16·7 in Birkenhead, and 18·5 in Salford.

Small-pox.

Four fatal cases of small-pox, belonging to Houghton-le-Spring U.D. Chester le Street R.D., Lanchester R.D., and Easington R.D., respectively, were registered during the quarter.

A supplementary table (VIII. *a*) showing the distribution of the cases of small-pox notified during the Quarter is given on pp. 24 and 25.

NATURAL INCREASE.

The natural increase of population in England and Wales for the Quarter under review by excess of Births over Deaths was 67,637, as against 82,710, 72,850 and 73,707 in the second Quarters of 1923, 1924 and 1925.

NOTES ON MARRIAGES.—First Quarter, 1926.

The number of *persons* married in the *first* Quarter of 1926 in England and Wales was 92,336, a decrease of 61,752 compared with the number in the preceding Quarter, and 34 less than that in the corresponding Quarter of 1925. The number corresponds to an annual rate of 9·6 per 1,000 of the estimated mid-year population.

UNITED KINGDOM AND IRISH FREE STATE.—
Fourth Quarter, 1925.

In Great Britain and Ireland 212,462 births and 158,714 deaths were registered in the three months ended 31st December, 1925. The natural increase in population was therefore 53,748. The number of persons married was 179,524.

For facts, in detail, concerning Scotland, Northern Ireland, and the Irish Free State, reference should be made to the Returns published by their respective Registrars General.

METEOROLOGY.***APRIL.**

Except for two short spells of fine warm weather, one at the beginning of the month and one round about the 12th, the weather during April was mild and dull generally and very wet in the central, southern and eastern districts. During the first few days of the month maximum temperatures of 70°F and above were recorded at several stations, especially in the central and eastern districts, and at some stations were the highest on record for the time of year. Low screen minima with ground frost at night were recorded in many places from the 8th to the 13th. Rainfall was in excess of the normal, except in the northern districts and in Wales where there was a decided deficiency, little rain falling during the first half of the month. Sunshine aggregates were below normal in most districts; the sunniest period generally was the 8th to the 13th, when records between ten hours and thirteen hours were obtained at several stations. There were frequent thunderstorms, accompanied by hail in many instances, during the month; they occurred generally on the 4th, 7th, and between the 17th and the 22nd.

MAY.

The weather during May was, on the whole, cool and changeable with considerable bright and showery periods, and a brief spell of warm weather from about the 21st to the 26th, when maximum temperatures of 70°F and over were recorded at many places, 79°F being recorded at London (Camden Square) on the 26th. Thunderstorms and hail showers were of frequent occurrence, and some snow fell in parts of the south Midlands on the 14th. Although the total rainfall for England and Wales as a whole was well above normal, the distribution varied from an excess in the central and north-western districts to a deficiency in the eastern districts and in Devon and Cornwall. Sunshine aggregates were deficient in most districts.

JUNE.

Mainly dull, wet weather with day temperatures more often below than above normal prevailed during the first three weeks of June. An improvement took place about the 18th, and, except for a short period of dry and cool northerly winds between the 22nd and the 26th, mainly fine, warm weather was experienced generally during the remainder of the month. The warmest periods generally were the 4th to the 9th, the 19th to the 22nd, and the last three or four days of the month. Ground frosts occurred on a few occasions at a number of places. Monthly totals of rainfall, most of which was accounted for during the first three weeks, were above the normal in the eastern and southern districts, and below in the north-western districts and in Wales. For England and Wales as a whole the month was the wettest June since 1912. Sunshine aggregates were above the normal in the western districts generally and below in the eastern districts.

* Furnished by the Director of the Meteorological Office.

* Excluding non-civilians.

† The populations relate to 1926. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland. Births are similarly corrected. Deaths in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas, and in the case of Belfast by the inclusion of certain institutional deaths occurring elsewhere. The figures for Edinburgh and Glasgow relate to the calendar quarter.

* For statistics of other Colonial and Foreign Cities during the First Quarter of 1926, see Quarterly Return for that period.

† The deaths in this column relate to all ages for Bombay, Oslo (Christiania), and Budapest, and to children under 1 year of age for Copenhagen, Stockholm, Gothenburg, the German Cities, Cairo, and Alexandria.

‡ Including 24 deaths from Plague in Bombay, 454 from Cholera in Calcutta, 1 in Bombay, and 3 in Madras.

§ Including deaths from Croup in Bombay, Paris, Amsterdam, Copenhagen, the German Cities, Budapest, Warsaw and New Orleans.

|| The estimated population and deaths refer to the civilian population only.

¶ The registration of Births in Bombay is incomplete.

EXPLANATORY STATEMENT.

The figures relating to Births and Deaths are tabulated from Returns furnished by the Local Registrars, those relating to Marriages from Returns received from the Clergy, Authorised Persons, Registrars of Marriages, &c. These figures may not correspond exactly with the revised figures published later in the Statistical Review.

The figures relating to Notifications of Infectious Diseases are summarised from those published in the Weekly Returns, adjusted in respect of any returns or corrections received too late for insertion in that series.

Table I. shows, for England and Wales, the Marriages, Births and Deaths for the 10 years preceding, and for each quarter of those years.

Table II. shows the Annual Rates calculated on the above.

Table III. shows the Birth and Death Rates, and Analysis of Mortality during the last 5 Quarters, in (a) England and Wales, (b) 105 County Boroughs and Great Towns, and (c) Smaller Towns with adjusted populations 20,000-50,000 in 1921.

Table IV. shows the Births, Deaths (distinguishing deaths of Infants under one year) in the Quarter under review for Administrative Counties with the Associated County Boroughs, and Table IVa. the Marriages in the preceding Quarter in England and Wales by Registration Counties.

Table V. shows, for the 105 County Boroughs and Great Towns and the Metropolitan Boroughs, the Births and Deaths (distinguishing certain causes and those of Infants under 1 year) and the corresponding annual rates for the 13 weeks ended 2nd October 1926.

Table VI. shows, for the 158 Smaller Towns, the Births and Deaths (distinguishing certain causes and those of Infants under one year) for the quarter ended 30th September 1926.

Table VII. shows the Births and Deaths (distinguishing certain causes) and death-rates in London and in certain cities in the British Empire and in foreign countries, in the last available Quarter.

Table VIII. is a summary of returns of Notified cases of Infectious Diseases for the 13 weeks ended 2nd October 1926. These figures are included in the present publication by arrangement with the Ministry of Health, in pursuance of Section 5 of the Census Act, 1920.

Table VIIIa. shows the local distribution of the cases of small-pox notified during the 13 weeks ended 2nd October 1926.

Note.—The returns for the quarters ending 30th June and 31st December respectively contain lists of the changes of boundaries of administrative and poor law areas during the six months ending on these dates, that for the quarter ending 30th September tables relating to summer mortality from diarrhoea and enteritis, and that for the quarter ending 31st December a summary of certain figures for the year.

NOTES ON THE THIRD QUARTER OF 1926.

ENGLAND AND WALES.

Births.

The Births registered in the *Third* Quarter of 1926 numbered 174,902 and were 6,933 below the number recorded in the corresponding Quarter of 1925. The Illegitimate Births totalled 7,246, or 140 fewer than in the third Quarter of 1925.

Of these 174,902 Births 89,140 were males and 85,762 females, giving a proportion of 1,039 males to 1,000 females; the average proportion in the 10 preceding third Quarters was 1,050.

The Births registered in the Quarter correspond to an annual rate of 17·8 per 1,000 of the estimated mid-year population for the year 1925. This rate is 0·8 per 1000 below that recorded in the corresponding Quarter of 1925, and was the lowest birth-rate recorded in any third Quarter except during the years 1917 and 1918.

Deaths.

The Deaths registered numbered 90,722 and were 23,096 less than in the preceding Quarter, and 4,332 less than in the corresponding Quarter of 1925. They included 46,940 males and 43,782 females, corresponding to an annual rate of 9·3 per 1,000 of the estimated population and a proportion of 1,072 males to 1,000 females. The general death-rate was 0·4 below that recorded during the third Quarter of last year.

Influenza was stated to be either a primary or contributory cause of death in 568 cases, or 0·6 per cent. of the total deaths.

Measured by the proportion of deaths of infants under one year of age to births registered, the Infant Mortality was equal to 57 per 1,000, this being 5 per 1,000 below the rate for the third Quarter of 1925, and 12 per 1,000 below the average of the 10 preceding third Quarters.

Urban Mortality.

The highest death-rates from the several epidemic diseases in the 105 Great Towns (Table V.) last Quarter were as follows:—

From *enteric fever* 0·08 in Gloucester; from *measles* 0·20 in Liverpool, 0·21 in Aberdare and 0·29 in Chester; from *scarlet fever* 0·08 in Burton-upon-Trent, 0·10 in Warrington and 0·12 in Gateshead; from *whooping cough* 0·24 in Bootle and Stockton-on-Tees, 0·26 in Norwich and 0·27 in Sunderland; from *diphtheria* 0·21 in Bury, 0·22 in Nottingham and West Hartlepool and 0·51 in Edmonton; from *influenza* 0·18 in St. Helens and Stockton-on-Tees, 0·22 in Rhondda and 0·25 in West Bromwich.

The highest death-rates per 1,000 Births from *diarrhœa* and *enteritis* among children under two years of age were 39·9 in Bradford, 41·8 in Sunderland, 49·4 in Liverpool and 57·6 in Birkenhead. Special tables relating to summer mortality from *diarrhœa* and *enteritis* are inserted in this Return (Tables IX and X).

Small-pox.

Four fatal cases of small-pox, belonging to South Shields C.B., Brandon and Byshottles U.D., Warrington R.D., and Easington R.D., respectively, were registered during the quarter ended 30th September, and another fatal case belonging to Willesden U.D. having been registered on the 1st October, is referred to in the footnotes to Table V which relates to the 13 weeks ended the 2nd October.

A supplementary table (VIII a.) showing the distribution of the cases of small-pox notified during the Quarter is given on p. 24.

Plague.

A fatal case of bubonic plague was registered in Liverpool C.B. during the quarter.

NATURAL INCREASE.

The natural increase of population in England and Wales for the Quarter under review by excess of Births over Deaths was 84,180, as against 98,812, 96,441 and 86,781 in the third Quarters of 1923, 1924 and 1925.

NOTES ON MARRIAGES.—Second Quarter, 1926.

The number of *persons* married in the *second* Quarter of 1926 in England and Wales was 156,598, an increase of 64,262 compared with the number in the preceding Quarter, and 7,244 less than that in the corresponding Quarter of 1925. The number corresponds to an annual rate of 16·2 per 1,000 of the estimated mid-year population (1925).

UNITED KINGDOM AND IRISH FREE STATE.—
First Quarter, 1926.

In Great Britain and Ireland 222,115 births and 165,395 deaths were registered in the three months ended 31st March, 1926. The natural increase in population was therefore 56,720. The number of persons married was 118,250.

For facts, in detail, concerning Scotland, Northern Ireland, and the Irish Free State, reference should be made to the Returns published by their respective Registrars General.

METEOROLOGY.***JULY.**

The weather was mainly fair, warm and dry except for some heavy local falls during the first half of the month; and unsettled with many fine periods during the latter half, with an unusual prevalence of winds from between north and east. A short spell of hot weather extended from the 11th to the 14th when maximum temperatures of 80°F. and more were recorded in most districts and night minima were unusually high. At Manchester on the night of the 12th-13th temperature did not fall below 70°F. Thunderstorms occurred frequently during the month, those of the 18th being unusually widespread and accompanied by heavy falls of rain, 103 mm. being measured at Rhayader, 84 mm. at Haverfordwest, 78 mm. at Somerton (Somerset), and 52 mm. at West Kirby. Over central and eastern England, the month's rainfall was generally slightly below normal; over northern and western England and over Wales rainfall was slightly in excess. Sunshine did not differ much from normal.

AUGUST.

August 1926 was on the whole fine and warm, the temperature excess being well marked both by day and by night. Rainfall aggregates showed rather wide local variations but in general were below normal, little rain falling in many parts during the last ten days of the month. Thunderstorms occurred in most districts on from one to five occasions. In south-eastern England a severe thunderstorm accompanied by high winds and heavy rain or hail occurred during the night of the 16th-17th causing considerable damage both to buildings and crops.

SEPTEMBER.

September on the whole was warm, very dry except in the northern and north-western districts and moderately sunny. Apart from severe local thunderstorms accompanied by heavy rain in the south-eastern districts during the early morning of September 1st, mainly fair weather was experienced generally during the first few days of the month. From the 5th to the 15th an unsettled westerly type of weather predominated with a brief hot spell about the 18th; at Camden Square (London) the maximum temperature on the 19th, viz., 90°F. was the highest recorded at that station in September since 1911 and the highest recorded at any station since July 1925. On the morning of the 19th severe thunderstorms occurred mostly in the northern districts and subsequently temperature became moderate. On the 24th northerly winds spread over the country giving cold, showery weather which lasted until the 28th when mainly fair, dry weather set in generally.

* Furnished by the Director of the Meteorological Office.

* Excluding non-civilians.

† The populations relate to 1926. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland. Births are similarly corrected. Deaths in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas, and in the case of Belfast by the inclusion of certain institutional deaths occurring elsewhere. The figures for Edinburgh and Glasgow relate to the calendar quarter.

† Including 1 death from small-pox

* For statistics of other Colonial and Foreign Cities during the Second Quarter of 1926, see Quarterly Return for that period.

† The deaths in this column relate to all ages for Bombay, Madras, Oslo (Christiania), and to children under 1 year of age for Copenhagen, Stockholm, Gothenburg, the German Cities, Cairo, and Alexandria.

‡ Including 11 deaths from Plague in Bombay, 599 and 276 from Cholera in Calcutta, 3 in Bombay.

§ Including deaths from Croup in Bombay, Paris, Amsterdam, Copenhagen, the German Cities, Budapest, Warsaw and New Orleans.

|| The estimated population and deaths refer to the civilian population only.

¶ The registration of Births in Bombay is incomplete.

Issued by the Registrar General.

LONDON.

PRINTED AND PUBLISHED BY HIS MAJESTY'S STATIONERY OFFICE.

To be purchased directly from H.M. STATIONERY OFFICE at the following addresses:
Adastral House, Kingsway, London, W.C.2; 120, George Street, Edinburgh;
York Street, Manchester; 1, St. Andrew's Crescent, Cardiff;
15, Donegall Square West, Belfast;
or through any Bookseller.

1927.

Price 1s. net.

EXPLANATORY STATEMENT.

The figures relating to Births and Deaths are tabulated from Returns furnished by the Local Registrars, those relating to Marriages from Returns received from the Clergy, Authorised Persons, Registrars of Marriages, &c. These figures may not correspond exactly with the revised figures published later in the Statistical Review.

The figures relating to Notifications of Infectious Diseases are summarised from those published in the Weekly Returns, adjusted in respect of any returns or corrections received too late for insertion in that series.

Table I. shows, for England and Wales, the Marriages, Births and Deaths for the 10 years preceding, and for each quarter of those years.

Table II. shows the Annual Rates calculated on the above.

Table III. shows the Birth and Death Rates, and Analysis of Mortality during the last 5 Quarters, in (a) England and Wales, (b) 105 County Boroughs and Great Towns, and (c) Smaller Towns with adjusted populations 20,000-50,000 in 1921.

Table IV. shows the Births, Deaths (distinguishing deaths of Infants under one year) in the Quarter under review for Administrative Counties with the Associated County Boroughs, and Table IVa. the Marriages in the preceding Quarter in England and Wales by Registration Counties.

Table V. shows, for the 105 County Boroughs and Great Towns and the Metropolitan Boroughs, the Births and Deaths (distinguishing certain causes and those of Infants under 1 year) and the corresponding annual rates for the 13 weeks ended 1st January 1927.

Table VI. shows, for the 157 Smaller Towns, the Births and Deaths (distinguishing certain causes and those of Infants under one year) for the quarter ended 31st December 1926.

Table VII. shows the Births and Deaths (distinguishing certain causes) and death-rates in London and in certain cities in the British Empire and in foreign countries, in the last available Quarter.

Table VIII. is a summary of returns of Notified cases of Infectious Diseases for the 13 weeks ended 1st January 1927. These figures are included in the present publication by arrangement with the Ministry of Health, in pursuance of Section 5 of the Census Act, 1920.

Table VIIa. shows the local distribution of the cases of small-pox notified during the 13 weeks ended 1st January 1927.

Note.—The returns for the quarters ending 30th June and 31st December respectively contain lists of the changes of boundaries of administrative and poor law areas during the six months ending on these dates, that for the quarter ending 30th September tables relating to summer mortality from diarrhoea and enteritis, and that for the quarter ending 31st December a summary of certain figures for the year. (See also page iv.)

NOTES ON THE FOURTH QUARTER OF 1926.

ENGLAND AND WALES.

Births.

The Births registered in the *Fourth* Quarter of 1926 numbered 164,489 and were 10,413 less than in the preceeding Quarter and 1,871 below the number recorded in the corresponding Quarter of 1925. The Illegitimate Births totalled 6,682, or 222 more than in the Fourth Quarter of 1925.

Of these 164,489 Births 84,008 were males and 80,481 females, giving a proportion of 1,044 males to 1,000 females; the average proportion in the 10 preceding fourth Quarters was 1,051.

The Births registered in the Quarter correspond to an annual rate of 16·7 per 1,000 of the estimated mid-year population for the year 1926. This rate is 0·3 per 1000 below that recorded in the corresponding Quarter of 1925, and was the lowest birth-rate recorded in any fourth Quarter except that of 1917.

Deaths.

The Deaths registered numbered 118,681 and were 27,959 more than in the preceding Quarter, and 7,589 less than in the corresponding Quarter of 1925. They included 60,510 males and 58,171 females, corresponding to an annual rate of 12·1 per 1,000 of the estimated population and a proportion of 1,040 males to 1,000 females. The general death-rate was 0·8 per 1,000 below that recorded during the fourth Quarter of last year.

Influenza was stated to be either a primary or contributory cause of deaths in 1,700 cases, or 1·4 per cent. of the total deaths.

Measured by the proportion of deaths of infants under one year of age to births registered, the Infant Mortality was equal to 76 per 1,000, this being 8 per 1,000 below the rate for the fourth Quarter of 1925, and 8 per 1,000 below the average of the 10 preceding fourth Quarters.

Urban Mortality.

The highest death-rates from the several epidemic diseases in the 105 Great Towns (Table V.) last Quarter were as follows:—

From *enteric fever* 0·15 in Wakefield; from *measles* 0·23 in Grimsby, 0·31 in Burnley, and 0·34 in Bootle; from *scarlet fever* 0·12 in Lincoln and in Tynemouth, and 0·18 in Chesterfield; from *whooping cough* 0·25 in Walthamstow, 0·26 in Warrington, 0·28 in Barnsley, and 0·36 in Carlisle; from *diphtheria* 0·30 in Ilford and in Northampton, 0·34 in Edmonton and in Nottingham, and 0·41 in Gillingham; from *influenza* 0·48 in Stockport and in Rochdale, 0·52 in Oldham, 0·54 in Exeter, and 0·56 in Aberdare.

The highest death-rates per 1,000 Births from *diarrhœa and enteritis* among children under two years of age were 31·0 in Wakefield, 31·3 in Liverpool, 33·3 in Sunderland, and 41·5 in Gateshead.

Small-pox.

Five fatal cases of small-pox, belonging to Willesden U.D., Lambeth Met.B., Easington R.D., Chester le Street R.D., and Lanchester R.D., were registered during the quarter. The Willesden case having been registered in the week ended 2nd October, 1926 is not referred to in the footnote to Table V of this Quarterly Return, but in that for the previous Quarter.

A supplementary table (VIIIa.) showing the distribution of the cases of small-pox notified during the 13 weeks ended 1st January, 1927, is given on p. 24.

NATURAL INCREASE.

The natural increase of population in England and Wales for the Quarter under review by excess of Births over Deaths was 45,808, as against 63,643, 62,292 and 40,090 in the fourth Quarters of 1923, 1924 and 1925.

NOTES ON MARRIAGES.—Third Quarter, 1926.

The number of *persons* married in the *third* Quarter of 1926 in England and Wales was 167,484, an increase of 10,886 over the number in the preceding Quarter, and 13,144 less than that in the corresponding Quarter of 1925. The number corresponds to an annual rate of 17·0 per 1,000 of the estimated mid-year population, and was 1·4 less than that recorded in the corresponding quarter of 1925.

UNITED KINGDOM AND IRISH FREE STATE.— Second Quarter, 1926.

In Great Britain and Ireland 232,201 births and 146,921 deaths were registered in the three months ended 30th June, 1926. The natural increase in population was therefore 85,280. The number of persons married was 182,472.

For facts, in detail, concerning Scotland, Northern Ireland, and the Irish Free State, reference should be made to the Returns published by their respective Registrars General.

SUMMARY 1926.

The Summary relating to the year 1926 giving the principal Tables published up to 1912 in the "Annual Summary," will be found on pages 26-43 of this publication, the Tables being numbered IX-XVI.

ENGLAND AND WALES.

According to the quarterly returns furnished by local registrars, 694,897 births and 453,795 deaths were registered in England and Wales in the year 1926. The natural increase of population, by excess of births over deaths, was, therefore, 241,102, the average annual increase in the preceding five years having been 298,263. The number of persons married during the year was 558,642.

The marriage rate in England and Wales during the year 1926 was 14·3 per 1,000 of the estimated population at the middle of the year, the birth rate 17·8 per 1,000, and the death rate 11·6 per 1,000. Infant mortality was 70 per 1,000 registered births. The birth-rate was the lowest recorded except during the war year 1918; the death-rate was equal to the lowest rate yet recorded (1923), and the infantile mortality was five below that recorded in the previous year.

A statement of the birth-rate and an analysis of the mortality during the year in England and Wales, London, and in the groups of towns is given in Table X; and Table XI shows the provisional birth-rate, death-rate (from all causes and from various causes), and infant mortality during the year in each of the Metropolitan Boroughs and 105 Great Towns.

METEOROLOGY.***OCTOBER.**

During the first ten days or so of the month, very mild unsettled weather with considerable fair periods prevailed ; between the 3rd and 6th day temperatures were in the neighbourhood of 70°F. but thereafter temperature gradually fell, the last two weeks of the month being unusually cold, with occasional showers of hail, sleet or snow and with frequent and severe ground frosts. There was a considerable frequency of winds between north-west and north-east. The second week was stormy.

NOVEMBER.

The outstanding feature of the weather of November was its exceptional wetness ; over England and Wales, regarded as a whole, it was the wettest November since 1870. The month's rainfall was the heaviest recorded in November at Rothamsted in 74 years' records, at Bath and Richmond (Surrey) in 60 years' records and at Camden Square (London), Sidmouth, Polapit Tamar (near Launceston) and at St. Michael's-on-Wyre (Lancs.) in over 50 years' records. The cold weather of October continued during the first few days of November but on the 5th temperature rose generally and apart from some rather cold weather during the last week, remained moderate with no very remarkable fluctuations. Sunshine aggregates were markedly below the average in eastern and south eastern districts.

DECEMBER.

December was abnormally dry as November was wet. In districts as widely distributed as Slough (Buckinghamshire), Bath, Lyme Regis, and Church Stretton, the total for the month was the smallest recorded in December in over 50 years' records ; it was the driest December at Rothamsted since 1864 and at Richmond (Surrey) since the commencement of rainfall records in 1866. Showers of snow or sleet and hail were experienced in many northern and eastern districts round about the 15th and the 22nd and were accompanied by temporary falls in temperature. In most districts, however, the mean temperature for the month did not show any considerable divergence from the average. Sunshine totals were generally above the average.

* Civilians only.

† The rates for 1926 are provisional.

Table III.—BIRTH-RATE, DEATH-RATE AND ANALYSIS OF MORTALITY during the last Five Quarters.

(Provisional figures. The rates for England and Wales for the year 1926 have been calculated on populations estimated to the middle of that year, while those for the towns have been calculated on populations estimated to the middle of 1925. The mortality rates refer to the whole population as regards England and Wales, but only to civilians as regards the groups of towns.)

—	QUARTER.	ANNUAL BIRTH-RATE PER 1,000 TOTAL POPULATION.	ANNUAL DEATH-RATE PER 1,000 POPULATION.							DEATH-RATE PER 1,000 BIRTHS.		
			All Causes.	Enteric Fever.	Measles.	Scarlet Fever.	Whooping Cough.	Diphtheria.	Influenza.	Violence.	Diarrhoea and Enteritis (under 2 Years).	Total deaths under one Year.

* Excluding non-civilians.

† The populations relate to 1926. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland. Births are similarly corrected. Deaths in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas, and in the case of Belfast by the inclusion of certain institutional deaths occurring elsewhere. The figures for Edinburgh and Glasgow relate to the calendar quarter.

† Including 1 death from small-pox

* Excluding non-civilians.

† These towns are included within the Metropolitan Outer Ring

‡ Excluding the civil parish of Folkestone next Sandgate.

§ As extended on 1st October, 1926.

¶ Hanwell U.D. having been added to Ealing M.B. on 1st October, 1926, the number of smaller towns is now 157 instead of 158 as in previous quarters.

* For statistics of other Colonial and Foreign Cities during the Third Quarter of 1926, see Quarterly Return for that period.
† The deaths in this column relate to all ages for Bombay, Madras, Oslo (Christiania), and to children under 1 year of age for Copenhagen, Stockholm, Gothenburg, the German Cities, Cairo, and Alexandria.
‡ Including 4 deaths from Plague in Bombay, and 1 from Cholera in Bombay, and 6 and 2 in Madras.
§ Including deaths from Croup in Bombay, Paris, Antwerp, Budapest and Warsaw.
¶ The estimated population and deaths refer to the civilian population only.
¶ The registration of Births in Bombay is incomplete.

Table X.—**Birth-rate, Death-rate, and Analysis of Mortality** during the year 1926.

(Provisional figures. The rates for England and Wales have been calculated on a population estimated to the middle of 1926, while those for the towns have been calculated on populations estimated to the middle of 1925. The mortality rates refer to the whole population as regards England and Wales, but only to civilians as regards London and the groups of towns.)

	BIRTH-RATE PER 1,000 TOTAL POPULATION.	ANNUAL DEATH-RATE PER 1,000 POPULATION.										RATE PER 1,000 BIRTHS.		PERCENTAGE OF TOTAL DEATHS.			
		All Causes.	Enteric Fever.	Small-pox.	Measles.	Scarlet Fever.	Whooping Cough.	Diphtheria.	Influenza.	Violence.	Diarrhoea and Enteritis (under two years).	Total Deaths under One year.	Causes of Death certified by Medical Practitioners.	Inquest Cases.	Uncertified Causes of Death.

* Excluding non-civilians

† Including 4 deaths from small-pox and 1 from bubonic plague in 105 Towns and 1 death from small-pox in London.

‡ The births for London and the Metropolitan Boroughs are the net numbers registered in the calendar year after correction for inward and outward transfers.

§ This rate being the summary of the four quarterly rates differs from that shown in Table X, which takes into account completely corrected deaths for the first nine months of the year.

Table XI.—105 COUNTY BOROUGHs AND GREAT TOWNS, &c., 52 weeks, 1926—continued.

TOWNS.	ESTIMATED POPULATION MID. 1925.	BIRTHS.	DEATHS.	Deaths from							Rate per 1000 living.		Death-rate per 1000 living.					Death-rates per 1000 Births.

* Excluding non-civilians.

† The populations relate to 1926. Deaths in Edinburgh and Glasgow are provisionally corrected by the deduction of deaths of non-residents domiciled in Scotland and by the addition of deaths of residents reported from elsewhere in Scotland. Births are similarly corrected. Deaths in Dublin Registration Area and Belfast are corrected by the exclusion of deaths of persons admitted into public institutions from without the respective areas and in the case of Belfast by the inclusion of certain institutional deaths occurring elsewhere. The figures for Edinburgh and Glasgow relate to the calendar year.

† Deaths from small-pox are included as follows:—Greater London, 2; Outer Ring, 1; 16 Great Towns, 1; South Shields C.B., 1.

* Excluding non-civilians. † These towns are included within the Metropolitan Outer Ring.

‡ Excluding the civil parish of Folkestone next Sandgate.

§ Including 2 deaths from small-pox.

¶ Hanwell U.D. having been added to Ealing M.B. on the 1st October 1923, the figures for the former area included in this table relate to the first nine months of the year only, and the number of smaller towns will be 157 in future.

** As extended 1st October, 1926.

† A day is reckoned as "generally clear" if the average of the estimates of the fraction of sky covered by cloud at 9 a.m., 3 p.m., and 9 p.m. is less than .2, and as "generally overcast" if the average is greater than .8. Days persistently cloudless and days persistently overcast refer to the period midnight to midnight.

* These populations relate, as far as possible, to the middle of the year. They differ in some cases from those in Table VII.

† The estimated population and deaths for London refer to the civilian population only.

‡ Including deaths from croup in Bombay, Paris, Antwerp, Budapest and Warsaw.

§ The deaths in this column relate to all ages for Bombay, Madras, and Oslo (Christiania), and to children under 1 year of age for Copenhagen, Stockholm, Gothenburg, and the German cities.

|| Including 53 deaths from plague in Bombay, and 5 from Asiatic cholera in Bombay and 100 in Madras.

¶ The Registration of Births in Bombay is incomplete.

(a) In consequence of the operation of this Order, Whittlesey "Union" became Whittlesey "Poor Law Parish."

- NOTES.—(1) On the 9th November, 1926, by Charter of Incorporation, the Urban District of Twickenham was created a Municipal Borough.
 (2) On the 9th November, 1926, by Charter of Incorporation, the Urban District of Leyton was created a Municipal Borough.
 (3) On the 9th November, 1926, by Charter of Incorporation, the Urban District of Ilford was created a Municipal Borough.
 (4) On the 1st July, 1926, by Ministry of Health letter dated 28th June, 1926, the Ministry agreed that the spelling of the name of the County of Carnarvon should be "Caernarvon."

MANUAL OF THE INTERNATIONAL LIST OF CAUSES OF DEATH

THIS Manual is issued
on the authority of the
Registrars-General for
England and Wales, Scot-
land and Northern Ireland
with a view to providing
for the use of public health
officers, the medical pro-
fession generally, and any
others interested, an official
statement of the practice in
force in the several parts
of the United Kingdom
with regard to the classifi-
cation of causes of death.

Price 2s. Post Free 2s. 3d.
